# **BE PROACTIVE**

Treatment targets and monitoring

# Manage diabetes well

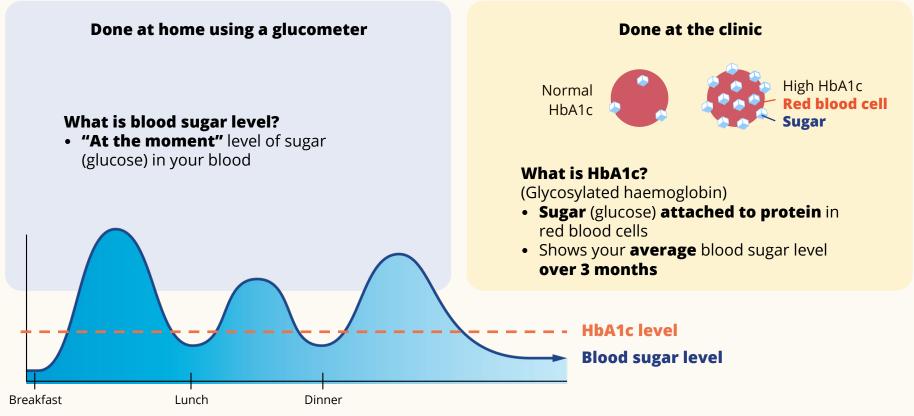

<sup>^</sup>HbA1c tells you how your blood sugar control has been like the past 3 months.

**Healthy eating habits and regular physical activity and exercise** can help you achieve target levels of blood sugar control, blood pressure and cholesterol

# Different ways to test your blood sugar level

# Different ways to test your blood sugar level

For individuals with Type 2 diabetes, consider self-monitoring (using a glucometer), if you are

At increased risk of developing hypoglycaemia (low blood sugar)

Pregnant with preexisting diabetes or Gestational Diabetes

Experiencing acute illness

Having difficulty achieving glycaemic goals

Fasting for religious reasons (e.g., Ramadan)

# Weight management in diabetes

Weight management is an important part of diabetes care. It helps you achieve better blood sugar levels, so keeping within your optimal weight range is important.

### How do I know if my weight is within the optimal range?

Body Mass Index (BMI) screens for weight categories that may lead to increased risk of cardiovascular health problems, but it does not diagnose the body fatness or health of an individual. BMI is one of the many useful tools individuals can use to track their health.

# For Asians, a BMI 23 and greater is considered of increased risk. You can use the formula to calculate your

BMI, then check against the table.

#### If you are overweight (BMI 23 and more), even losing 5 – 10% of your weight can help lower your blood sugar levels, blood pressure and cholesterol levels.

Speak to your healthcare team for personalised advice on how best to achieve or maintain an optimal weight.

### BMI = Weight (kg) Height (m) x Height (m)

### WHO Asian classification of BMI risk category

BMI (kg/m2)	Health Risk
27.5 and above	High risk for cardiovascular diseases^
23.0-27.4	Moderate risk for cardiovascular diseases^
18.5-22.9 [optimal]	Low risk for cardiovascular diseases^
Below 18.5	Risk of nutritional deficiency diseases and osteoporosis

<sup>^</sup>Cardiovascular diseases affect the heart or blood vessels, and include heart disease and stroke.

## What to do when I am sick\*?

\*Feeling unwell, e.g., fever, cough, runny nose, vomiting and diarrhoea

See your **doctor** 

Discuss with your healthcare team if **dose adjustments** need to be made

Get plenty of **rest** 

Check your blood sugar level more often

Drink plenty of **water** 

Have small, frequent meals or fluids (e.g., soups, diluted juices or sweetened drinks)

### When do I have to see my doctor?

Chest pain, shortness of breath, fruity breath, dry lips or tongue or abdominal pain

Severe vomiting or diarrhoea for more than 6 hours

**Recurrently low blood sugar levels** (< 4 mmol/L) **or persistently high** (> 16 mmol/L) for more than 24 hours

Loss of appetite

**Skin sores**
